

ProjectMind AI Analysis Workflow

ProjectMind Workflow Pack

What this app does

ProjectMind is a live prototype that reads uploaded project PDFs, extracts text, derives a structured project model, and refreshes the dashboard, risk board, commissioning assistant, tracking map, analytics, and AI chat from the same state.

It is intentionally built so the upload is not cosmetic. The backend parses the documents, stores the extracted content, and updates the visible insights after each upload.

System architecture

Frontend	Handles upload, loading states, live views, chat, and export actions.
Backend	Accepts PDFs, extracts text, builds the project model, and persists state.
AI layer	Uses Gemini when a key is present, otherwise falls back to project-aware logic.
State store	Keeps documents, messages, and insights available for every screen.

Why this is a working demo

- Uploading a document changes the model, not just the file list.
- The UI now shows analyzing and insights-ready states during the flow.
- The same backend state powers the dashboard, Copilot, export PDF, and all analytics pa
