

Geospatial Shipment Tracking - Route Status

Use this PDF to show a shipment map or route overview that pairs location status with schedule risk. It is visually nice, but the real value is linking shipment movement to task exposure.

Shipment status board

Equipment	Origin	Current stage	Status
UPS	Jebel Ali Port	In transit	Delayed
Transformer	Factory yard	At dispatch hub	At risk
Chiller	Local warehouse	On site	On track
Switchgear	OEM plant	Customs clearance	Watch

How to narrate it

The map should make it obvious where a shipment is, whether it is late, and which downstream installation task it affects. The goal is not just map aesthetics, but early schedule warning.

Judge talking point: This is a strong visual layer on top of the same prediction engine.
